London, UK

Personal Summary

- UK-based software engineer working client-facing, building and deploying production systems across the full stack and cloud platforms.
- Translate business requirements into working software; use AI tooling routinely in day-to-day development. Comfortable moving between backend services, frontend delivery and cloud infrastructure,

Experience

Aldemis

May 2025 – Present

Software Engineer / Technical Consultant

London, UK

- Acted as software engineer across 4 client projects within the transport (1 project) and fintech (3 projects) industry. Well versed in AI-assisted software development.
- Currently developing software for a startup client using .NET, Next.js, Azure and GCP, contributing across backend services, frontend development and cloud infrastructure.
- Restored and redeployed a dormant banking application built with .NET and AWS, resolving deployment and infrastructure issues to return the platform to a stable state.
- Assumed responsibility for a Django, PostgreSQL and AWS accounting platform after the departure of the previous engineering team. Delivered new features, implemented AWS services (Lambda, EC2, RDS), and maintained operational continuity until a new team was onboarded.

Freelance

Nov 2024 – May 2025

Full-stack Software Engineer

London, UK

- Built and deployed a Full-Stack app using Next.js (typescript and tailwind CSS), Supabase backend and Vercel. Managed PostgreSQL db, and implemented a RESTful API for edge functions, automated a CI/CD pipeline.
- Developed a mobile app using Flutter and an AWS serverless backend using AWS CDK in Python. Integrated external APIs, with CI/CD pipeline and managed the project using Jira and Git.

Etisalat

Jun 2023 – Aug 2023

System Development Intern

- Developed and maintained internal web applications in C# with ASP.NET MVC, and automated manual business processes using UiPath.

Education

University of Surrey

Sep 2021 - Jun 2025

Master of Engineering (MEng) in Computer Science

Guildford, Surrey

- **Grade:** 1st First-Class Honours
- **Dissertation:** AI Music Generator – Transformer-based model for generating retro video game music, owning the pipeline end to end from data collection and cleaning through to training and hyperparameter tuning.
- **Master's Project:** Data-driven analysis of UK electricity transmission system and the electrification of heating. Delivered with a cross-disciplinary engineering team.

Achievements

- Courses: Machine Learning, Data Science, Statistics and Probability
- Competitions: Hackathons ran by Encode
- A Levels: Maths, Physics and Computer Science
- Sports: Brazilian Jui-Jitsu Competitor, Gym, Running
